

Review of: "Economics of Cattle Fattening - A Case of Bangladesh"

Manbar Khadka

Potential competing interests: No potential competing interests to declare.

This is a well-written research paper discussing the profitability and marketing system of cattle fattening in Bangladesh. The story flows very nicely with empirical evidence. My suggestion would be to expand the policy implications of this research. The research has relied on a purposive sampling method with a sample size of 120 from three districts. I would also suggest further expanding the research, making it nationally representative.
