Potential competing interests: The author(s) declared that no potential competing interests exist.

Authors aim to describe a case report involving a middle-aged female with anosmia and dysgeusia post COVID-19. Stellate ganglion block was performed which resulted in complete resolution of symptoms after 2 blocks. This is an interesting case. However, there are a few concerns:

1. Effect of stellate ganglion block needs to be described.
2. How was the anosmia and taste disturbance assessed? Any objective/subjective assessments performed? If not, why was it not performed?
3. Has stellate ganglion block been performed in anosmia following other conditions notable viral-induced?
- 4.
