

# Review of: "Haematological and Biochemical Patterns in the Liver Function of a Syrup Made From Vitex Doniana Fruit"

Saritha Marella

**Potential competing interests:** No potential competing interests to declare.

The article is well focused on the impact of Vitex doniana fruit syrup on liver functions in the in vivo studies. However, a lack of projection on some points is observed.

1. The concluding sentence regarding the recommended dose among the trials is imperative.
2. The presence of phytoconstituents responsible for the enhanced liver functioning in the fruit syrup needs to be addressed with citations. This could add greater support to the article.
