

# Review of: "Digitalization of research: do ICT improve scientific production in developing countries?"

Essiagnon John Philippe Alavo

Potential competing interests: No potential competing interests to declare.

## • Suggestions to Author/s

### Introduction

- Include literature gap and study's contribution. When it comes to literature review, the author needs to shed light on the existent research gaps in the literature and contribution of present research.

### Material and methods

- The authors need to present the analytical framework in detail supported by literature, define and describe the variables used in the study and explain the model employed.
- Try to be more specific and clearer of variables measurement.
- Explain more your sampling procedure to make it easy to understand for the readership of the journal

### Results and discussion

- Please read the authors guide about this section re-structure it.
- Please, kindly consider if you could include appropriate subsections in the discussion section to make reading easier for the readership of the journal.

### Conclusion

- Could you add in more policy implication?
- Authors must bear in mind that conclusion is simply a 'take home message' based on the findings presented.  
Therefore, I suggest that authors reconstruct the write-up in the conclusion and include policy recommendations rather than general recommendations.
