Potential competing interests: No potential competing interests to declare.

The paper offers a thorough analysis of the obstacles and solutions related to preserving long-term, reasonably priced housing for Uganda's middle-class and lower-class populations. It does a good job of highlighting the main problems that Uganda's housing sector faces, such as expensive land prices, restricted financing options, and poor infrastructure. There is plenty of pertinent information and citations to reliable sources to back up the topic of Uganda's housing problem.

A variety of achievable strategies and interventions are offered in the section on sustainable solutions for affordable housing, such as the use of energy-efficient fixtures, financial accessibility, policy creation, and community engagement. The inclusion of success examples, like the Marc Thorpe Affordable Housing Project, gives the suggested solutions more legitimacy and illustrates how applicable they are in the real world.

All things considered, the paper gives insightful analysis of Uganda's housing problem and offers doable suggestions for legislators, developers, and other interested parties to support the creation of cheap and sustainable housing options. The paper significantly advances the conversation on housing affordability in Uganda with its in-depth study and solid arguments.
