Dear Gabriele Marinello

Peer Review Team, Qeios

The paper "A method to reduce false positives in a patent query" by Johannes Van Der Pol and Jean-Paul Rameshkoumar was revised as requested previously and the manuscript fulfils the high standards required for publication in "Qeios".

We analyzed the originality, scientific quality, relevance to the field, presentation and adequacy of the references of the paper.

This manuscript is acceptable after minor revision (discussion should be implemented). Indeed, it is necessary to improve the resolution of the figures and include more recent references on the subject.

With kind regards,

Dr. Débora Dummer Meira.
