**Potential competing interests:** No potential competing interests to declare.

The article offers or more clearly the advantage of teacher professional development to improve the quality of education, i.e. students' academic performance, particularly in Nigeria. Having involved in a total of 2886 students across the country, it results a rigorous finding on how to improve the education quality in the country; through promoting more and more teacher professional development for their teacher.

Yet, study needs more a brief elaboration about the forms (educational design, curriculum etc) of the teacher professional development pursued by the govt of Nigeria; which have a good result. The information would give more justification why there is a success and good story on the efforts to improve the quality of education worldwide particularly in developing countries.
