Curie Scoring System

National Cancer Institute

Source

National Cancer Institute. *Curie Scoring System*. NCI Thesaurus. Code C133462.

A semi-quantitative scoring system, developed at the Curie Institute in France, used for staging neuroblastoma patients at diagnosis and for response assessment following induction chemotherapy. Following whole-body ¹²³I-mIBG scanning, osteomedullary involvement is scored for 9 skeletal segments plus a tenth score for soft tissue involvement.
