

Review of: "Deep Learning in Medical Image Registration: Introduction and Survey"

Suganyadevi S

Potential competing interests: No potential competing interests to declare.

1. The overall presentation is logical and sensible.
2. In short, the readers are not very interested in the opinions and thoughts of the authors. Rather the readers are interested in detailed results from the recent research literature. The core of the survey is promising but preliminary.
3. The authors should clearly mention the challenges in the abstract. Mention a few recent techniques and highlight what are the challenges faced by the systems and then present the proposed objective. Objectives and challenges are quite different from each other.
4. Literary style of the paper should be improved.
5. Measure the performance of the proposed model with various parameters and discuss the observations in detail.
6. A comparative analysis of the proposed model and existing techniques can be included for better validation.
7. Experimental section needs detailed explanation for the results obtained.
