Overall, this is an excellent, timely, well-referenced, article that contributes much need information on this subject of neurodivergent women. However, it does need some edits as follows:

1-In the abstract, the words "typical or normal" should be written in quotes with each of these words in its own set of quotes

2-In the first paragraph after the Abstract, "a wide range of symptoms" should be changes to "a wide range of traits"

3-The paper need to be edited for commas. The are numerous sentence that list several factors or have several phrases but they are missing commas. There are also other sentences that are missing commas.
