

Review of: "Deep Learning Modeling for Prediction of Cognitive Task Related Features from Resting-state fMRI Data"

Kaviyarasi Ramanathan

Potential competing interests: No potential competing interests to declare.

Well written and informative paper.

Some suggestions that I have

In methodology, include the pre-processing steps in detail.

Provide more information about the performance of the cGCN regression model on different subgroups of participants.

Providing thorough discussion of the implications of the findings for the diagnosis and treatment of cognitive disorders.

I hope these revisions make your paper more stronger
