Potential competing interests: No potential competing interests to declare.

The great potential of LLMs in a wide range of domains is a matter of fact. It is of course interesting to deepen the benefits of LLMs to one of the most challenging and fascinating fields of study, as is bioinformatics. Nonetheless, the paper is just a list of application ideas with not enough references and details concerning concrete ways of applications. Therefore, I encourage the author to formally restructure his manuscript in order to give it a referable scientific value.
