# Tetanus-CMV Fusion Peptide Vaccine

National Cancer Institute

## Source

National Cancer Institute. *Tetanus-CMV Fusion Peptide Vaccine*. NCI Thesaurus. Code C78821.

A vaccine containing an inactivated epitope of tetanus toxin fused to a cytomegalovirus (CMV) peptide epitope, with potential anti-viral and immunomodulating activities. Upon administration, tetanus-CMV fusion peptide may stimulate a cytotoxic T-lymphocyte (CTL) response against CMV in the CMV-infected host. Tetanus toxin contains universal T cell helper epitopes.
