Review of: "Where Are the Female Role Models in Science?"

Rosio Schneider[1]

1. Universidad Nacional de Misiones, Argentina

The article addresses a critical and current issue: the invisibility of female role models in STEM, with a necessary emphasis on the disparities between the Global North and the Global South. The manuscript correctly argues that the lack of representation is not just a matter of numbers, but of systemic biases and postcolonial dynamics that affect women's academic aspirations in the Global South.
