**Potential competing interests:** No potential competing interests to declare.

Please send this article for English editing because the overall writing of the article is not to the English standard. The comparison between data collected and data from other almonds is too limited. Every parameter should be compared with almonds from America or Australia or any country clearly. For example, compare data for minerals and data for phytochemicals from your collected data with almond data from America. Please mention clearly what statistical test was used for every experiment. For example, was correlation used for what experiment?
