Potential competing interests: No potential competing interests to declare.

1. The title is quite vague in describing the topic. I recommend changing it to a more specific title that accurately reflects the content of the paper. For example, choose a clearer title like "Mechanisms and Therapeutic Strategies of LSD-1 in Hereditary Breast Cancer."
2. In the introduction, consider providing more background information to help non-specialist readers understand the importance of breast cancer, BRCA1/2 genes, and LSD-1. Also, explicitly state the research question and the main objectives of the paper.
3. Make sure each paragraph has a clear topic sentence to guide readers in understanding the main point of that paragraph. Additionally, ensure there are smooth transitions between paragraphs to help readers follow the logical structure of the paper.
4. In the discussion section, author should delve deeper into the significance of your research findings and compare them to previous studies. Additionally, discuss potential clinical and research applications as well as future research directions.
5. Thoroughly proofread the paper for grammar and spelling errors.
