Potential competing interests: No potential competing interests to declare.

The work needs a major revision:

1) Many researchers have presented many works on the non-Fourier heat equation like:

i) DOI:10.1080/01495739.2016.1192847, ii) DOI:10.1007/s00542-017-3425-6, iii) DOI:10.3233/JAE-150131, iv)

DOI:10.1016/j.ijthermalsci.2016.04.020, v) DOI:10.1080/15376494.2016.1196793, iv)

DOI:10.1080/15376494.2016.1196793,

and so on. The introduction should be expanded to include important references in the research topic.

2) The novelty and original contribution of the carried-out study should be specified more clearly.

3) More insights should be included in the conclusion section.

4) Results should be clear and concise, and the discussion should explore the significance of the results.

5) Please clarify the purpose of the research.

6) There are some misprints that can be corrected in the revised version. Running a spell check would remove the above-mentioned typographic mistakes and make the manuscript better.

7) The discussion part of the article is not based on the literature.

I can't recommend this work for publication in Qeios in its present form.
