Review of: "New Method to Identify Potential Illegal Water Use Location by Using Remote Sensing and Neural Networks in Laguna de Aculeo, Chile"

Mojtaba Poursaeid[1]

1 Payame Noor University

Dear editor, this article is hybridized by the remote sensing and ANN approaches for identifying the illegal water usage in scarce areas in Chile.

So I reviewed it, and it should be improved significantly.

1. The article must find a scientific structure for better understanding. The structure is poor.
2. Reinforce the study contributions and their novelty. In this format, it's vague! You can use the table to highlight them.
3. If applicable, can you use evaluation metrics for understanding the model accuracy? Such as RMSE…?
4. If you follow the comparison of the ANNs' output and their correspondent actual, you must present the response plots or other approaches for leading the readers to your study findings. Please use your outputs in a diagram or chart in the correspondent of aerial imaging.
5. If applicable, target the abstract and introduction doubts! This helps readers to better understand the topic and your purpose.
