

Review of: "System and Method for One or More Extruders Using a Robotic Arms to Print a 3D Model"

Joaquim Netto

Potential competing interests: No potential competing interests to declare.

The purpose of the document is not clear. As a scientific article, the manuscript lacks depth and a clear contribution to the field. The text seems more appropriate for a patent application, especially the section describing the figures. The terminology requires more attention (e.g., it is either additive manufacturing or 3D printing, not additive printing).
