Potential competing interests: No potential competing interests to declare.

Author can refer to the format of a plant monograph. There should be a separation of nutritional composition and phytochemical composition. Traditional uses should have their own section, and pharmacological actions should have their own section as well. Information on toxicity studies/safety assessment will add value.

This review should aim to determine whether it is more about health efficacy or agriculture (the cultivation of the plant), so that the content will have more impact, rather than covering everything under the sun.
