The study is well-designed for the purpose, but there are issues with understanding the article.

- Language editing required
- I would appreciate it if you could specify the total number of animals used for each group.
- The abstract does not contain a summary of the study; therefore, it is not understandable.
- The Materials and Methods section is lacking and requires code numbers for the materials used.
- It is necessary to specify the number of samples used for each parameter examined.
- Improving the quality of the figures is necessary.
- To gain a better understanding of the results, a table can be created.
