Potential competing interests: No potential competing interests to declare.

The topic and study of the article are very interesting, but it is not clear what the purpose of the article is, whether it is the result of research or a proposal. Consistency between the abstract, background, and subsequent description is also not yet visible, making it difficult to digest properly. The author may need to arrange the article according to a standard format so that it is more interesting and easy to understand for the benefit of all those who read it.
