Potential competing interests: No potential competing interests to declare.

- The structure of the paper needs to be improved.
- It is necessary to specify/describe the methodology and goal of the paper.
- Conclusions should be an integral part of the paper.
- It seems that the biggest part of the paper is simply copied and pasted from the Agricultural Targets of Turkey's National Climate Change Adaptation Strategy and Action Plan 2011-2023. This approach is simply not acceptable. Please try to reduce this section or summarize the most important aspects of the strategy.
- The strategy presented should be linked to the analysis in a way that presents either the progress or obstacles in achieving the strategy's objectives.
- When reading the paper, it is often unclear whether certain paragraphs or text were extracted from the strategy or some statistical document/analysis. Therefore, it is very important to distinguish between the author's analysis and information taken from documents.
- More literature sources should be cited.
