

Review of: "Investigation of Mechanical Properties of Sisal Fiber and Sugar Palm Fiber Reinforced Hybrid Composites"

Hisham Mustafa Mohamed Khater¹

¹ Housing and Building National Research Center

Potential competing interests: No potential competing interests to declare.

1-introduction: Symbol "CG, KG "refer to what? Also, check language in this section well. Introduction needs to be upgraded where it provides little information related to the studied topic.

2- Section 3: ASTM standard needs to be identified and assigned in the reference list.

3-section 3.3: Authors mentioned that they treated fiber with alkali 5 %, whilst they mentioned previously that they used 20 % alkali on page 7.

4- Section 4.1: The first paragraph in this section should be assigned to section 3.1.

5- There are many repeated paragraphs in the materials section 3 and results section 4, including test methods for each experiment.

6-section 4.3: There is no explanation for the behavior of the studied parameters.

7-section 4.4: Water absorption equation should be in section 3.4. By the way, what does W_w refer to?

8-Table 2: There were weights for 5 days, while % w began from day 2.

9-Figure 10: Y-axis should be for water absorption % instead of the existing axis.

10-Reference list should be updated, as the number of references was too small and needs further research about the related field.
