Potential competing interests: No potential competing interests to declare.

This paper proposed a home monitoring dedicated for detection fire. The authors prototyping and give both the detailed design and concrete implementation. However, the paper could be improved further. Here are some suggestions:

1. Please, use English words only.
2. The related works should be reviewed on the state-of-the-art papers in this area, then put the merits to evaluate the proposed systems, show the merits and demerits of them.
3. Based on the above review, show the reader which features are missing and what is your contribution or add to knowledge to stress the need of your prototyping.
4. Add IoT, Smarthome to your keywords.
5. I think, from Engineering perspective, the system is re-usable, that can be extended both horizontally and Vertically. However, the architectural design is missing.
6. With the current advancement, may be it is a good idea to put on demand Camera to the system.
7. Privacy and security issues should be stated in nay IoT based systems. At least the author should defined the scope or limitation of the paper.
8. Recommendation for future work is missing.
