

Review of: "[Case Study] Photobiomodulation (PBMT) and Its Interface with Sleep Dentistry: Clinical Case Report"

Joubert Aires de Sousa

Potential competing interests: No potential competing interests to declare.

The introduction of the article lacks more information that could define the objective of the study, and there are even paragraphs without citations.

I also missed the Parkinson's assessment questionnaire.

In the results and discussion topic, the results obtained were not very clear, and the discussion of these data was very superficial, without sufficient argumentation to reach the conclusion drawn.
