**Potential competing interests:** No potential competing interests to declare.

This is a cross-sectional descriptive study on 61 subjects. As a descriptive study authors just presented a description on some factors about subjects of this study. The first question is sample size of the study. How did you calculate the sample size? I mean is it enough for this study and is this a representative sample?, though there is no comparison group here.

When there is a comparison group and with proper significance test the association between two groups is measured you can present associated factors with ..... Otherwise data should be presented as frequency and proportion of. Therefore, the title of Table 4 could not be "Factors associated with regular substance..."

Considering the above mentioned comments if the policy of the journal is to publish descriptive studies the paper could be published with minor revision.
