REVIEW COMMENTS

The reviewer thanks the authors and Qeios for the opportunity given to review the article.

1. In section 2.1, Figure 1.2 shows sisal plants with some of their leaves chopped. There is no Figure 1.2 in the paper.
2. How were the sisal and palm heart fibres extracted?
3. What is the reason for NaOH treatment with a concentration of 20% for 3 hours? Are there any previous studies conducted, or are there any papers you referred to?
4. Details about the epoxy and curing agent must be added in the Materials section.
5. Kindly include the mechanical properties of both the fibres.
6. References and citations should be improved.
7. In Figure 8, the strain value is not entered correctly. The decimal points should be checked. (Only commas ,, are given.)
8. The conclusion part can be rewritten.
