

# Review of: "Assessment of Quality, Bacterial Population and Diversity of Irrigation Water in Selected Areas of Minna, Niger State, Nigeria"

Selina Ama Saah

Potential competing interests: No potential competing interests to declare.

Introduction • The problem statement must be stated clearly, and the gaps in existing research must be clearly stated. • The numbering of the tables should commence with that in the Introduction. Materials and Methods • Why the choice of the four locations? • Describe how the various parameters were determined and reference them appropriately. • A sample map would be appropriate. • The specifications of the various instruments must be given. • What containers were used for the sampling? Results and Discussion • What is the justification that the bacteria are coming from the water and not the hose used to transport the water? • Some of the tables are not clear. Conclusion • The References • References are too old. NB: Check for the writing of pH, formatting, grammar, and degrees in the entire document
