Potential competing interests: No potential competing interests to declare.

The article contributes to the development of Konjac cultivation. It can be published.

My comments are the following:

1. In the summary section, you can add a precision regarding the need for more research on Konjac, indicate the priority topic for research, for example types and levels of shade in Konjac cultivation.
2. In the methodology followed for data analysis and determining the profitability of the Konjac crop, it will be better to use historical data of production and sale of not less than 5 years.
