Potential competing interests: No potential competing interests to declare.

I did not see this article as a controversial academic paper on the interdisciplinary field of science and religion. Actually, it is a proselytizing article. The comparison between the concepts of quantum physics and the Bible is more of an exaggeration. If the author can provide a scientific-social-historical-cultural reason for these similarities, it would be a pleasure to read. It is not enough to simply refer to the similarities as consciousness, although it has not clarified it sufficiently either.
