Potential competing interests: No potential competing interests to declare.

The topic is quite interesting and has the potential to assist stakeholders in decision-making. However, the current manuscript may need more evidence to support its contributions.

Firstly, the paper's structure needs to be revised to make it clear, and proofreading is needed. For instance, both Section 1 and 2 are titled "Introduction."

Secondly, since multiple datasets are involved, the authors need to provide more details.

Finally, and most importantly, the method selection needs to be explained. Why was GARCH-DCC chosen? What are its pros and cons? Were any other methods considered for inclusion in future work? The present outcomes may offer some perspectives, but without comparisons, they are not fully convincing.
