CTP-37

National Cancer Institute

Source

National Cancer Institute. *CTP-37*. NCI Thesaurus. Code C1776.

A synthetic peptide vaccine consisting of the carboxy terminal peptide (CTP) of human beta chorionic gonadotropin (beta-hCG). Vaccination with CTP-37 may stimulate the host immune system to produce antibodies against beta-HCG, leading to a decrease in the proliferation of tumor cells that overexpress beta-HCG. (NCI04)
