Dear Author,

I read your study with interest. The subject of the study is current and remarkable. I congratulate you on your choice of topic.

My opinions about the study

1. It is recommended to expand the summary section regarding the subject of the study.
2. It would be appropriate to present suggestions for future studies in the conclusion section of the study.
3. It is appropriate to use DSM-5 instead of DSM-V.

In my opinion, this study is publishable after minor revision in your journal.

Best regards,

Cicek Hocaoglu
