

# Review of: "The Evolution of Consciousness Theories"

John Torday<sup>1</sup>

<sup>1</sup> University of California, Los Angeles

**Potential competing interests:** No potential competing interests to declare.

This is a well-written, conceived, and timely review of the field of 'consciousness'. However, there is a burgeoning aspect of the field which the author has overlooked, namely consciousness of the single cell. There are a number of contributors to this concept: Arthur Reber, Frantisek Baluska, William B. Miller, and John S. Torday. Only Torday has provided a mechanistic basis for consciousness of the single cell based on Symbiogenesis and Epigenetic Inheritance, forming the basis for physiology. He proposes that consciousness is the aggregate of consciousness.
