Potential competing interests: No potential competing interests to declare.

Title: The title appropriately describes the study

Abstract: The author could have included a line to introduce why the study was conducted. The results are adequately presented as well the the recommendation

Main write-up

Introduction: EPI coverage is well outlined. Literature review on invalid doses as well as barriers to effective immunization is presented well.

Methodology: Author should indicate whether the sample size of 440 is only for quantitative data or not. Method of selection of 9 respondents for qualitative data not explained.

Results and methods: well outlined

Conclusion: Apt
