ARTICLE REVIEW

Digital Mapping of Resilience and Academic Skills in the Perspective of Society 5.0 for Higher Education Level students

1. Very long introduction, they do a historical review of the concept of resilience, to save space you can use a table where the concept, definition, author are mentioned, it is easier and faster to read it like this, you can make brief comments in the text where they are compared the differences and similarities of the concepts, and only in this article should you develop the definition that best suits your conceptual interest.

2. Formulation problem is ok

3. Objectives ok

4. Literature review: on the subject of Society 5.0, a historical development is made that can be interesting but it is not necessary in the extent to which it is developed, it can distract from the central objective, it is suggested only to define the concept and place the definitions in a table. main characteristics of the other societies only to see the conceptual historical evolution of the societies.

5. Digital Resilience: the information included in this section has already been mentioned in some way in the introduction section, it is suggested to integrate these 2 sections to avoid repeated information.

6. It is requested to improve the quality, edition and resolution of the figures included in the text

7. Academic Skills: this information has already been mentioned in the previous sections, it is suggested to delete it.

8. Resiliency Digital Instruments: according to the authors, the definition of Digital resilience is: "it is defined as a resource that is important to sustain human life in the digital era. Digital resilience refers to technology such as the Internet in the digital age and society". This questionnaire does not have items that refer to the definition of digital resilience.

9. In the results and discussion section there is a lot of information derived from the research, but it is suggested to present these results in the order in which the Research purposes have been established to understand more clearly that the research has promptly met these objectives!

10. It is an original investigation, which validates what has been achieved in other countries, but it should be more interesting for the reader to find more summarized information from the introduction and in the results and better organized discussion so that the contribution of this is more strengthened. investigation.
