The general overview of the manuscript is okay for the scientific community, but there are a lot of lapses and inconsistencies in the write-up. I think the title needs to be modified. I suggest "Phytochemical, bioactive compounds, and hepatoprotective effect of *Camellia sinensis* extract on....." The authors need to work on the Materials and Methods, especially the Total phenolic and Total flavonoid contents. They must rewrite these portions. These portions are not clearly written, illogical, and difficult to follow and understand. All the highlighted portions must be addressed. The abstract is okay and is appropriate.

The discussion is too scanty. Some of the statements are way overboard. Authors should work on the discussion.

As it stands now, the manuscript must be worked on before it can be deemed correct. Authors need to work on the introduction, materials and methods, and discussion.
