The review article title "The Growth Performance of Nile Tilapia (*Oreochromis Niloticus*) Fed Low-Cost Fish Feeds Formulated From Fish By-Products, Fishery By-Catch and Pig Blood-Meal" is crucial for the aquaculture industry, and I recommend this paper for publication with the following minor corrections;

Missing data of survival ratio (%) in both text and table?

Please mention the reason behind using the fish-based diet instead of the plant-based diet, because we know that *O. niloticus* is an omnivorous species and the fish-based diet is more expensive than the plant-based diet?

Please write three replicates instead of replicated three times in the abstract.

What is the size of the pelleted feed fed to 0.6g fingerlings? Please write in the methodology.

Please mention the experimental season?

What feed was provided during the acclimatization period? Please mention in the methodology.

What's the day and night period in your experiment?
