Potential competing interests: No potential competing interests to declare.

The manuscript provides a comprehensive overview of reproductive health issues in dairy cows in Wolaita Sodo town, Ethiopia. Addressing a few points might further strengthen the manuscript and contribute to its overall quality and impact.

Clarity and Structure:

- The manuscript is well-organized, but consider dividing the discussion section into subsections for each reproductive disorder if possible to improve clarity and readability.

Introduction:

- Provide a more detailed rationale for why reproductive efficiency is crucial for the success of dairy operations.
- Include recent references to support statements about the dairy industry in Ethiopia and its challenges.

Results:

- The results are well-presented in tables. Consider adding figures or graphs to visualize the incidence risk and risk factors.
- Include a brief summary or synthesis of the key findings before delving into the detailed risk factor analysis.

Discussion:

- Emphasize more the significance of the study's findings in the context of improving dairy farm management and productivity in Ethiopia.
- The authors discussed the limitations of the study on selected dairy farms; however, they could also consider mentioning limitations such as potential biases or constraints, and propose avenues for future research.
