Hi,

Thanks for giving me this opportunity to review this interesting article.

The overall its a good research work but there are some deficiencies which need to be improved. I have mentioned in the comments with in attached file. In my point of view, this research article English need to be improved. Specifically, the key words there are many key words which are not making any sense in the article. I would suggest to the author to find a research article related to same research and modify the key words.

Thanks

Sikander Ameer
