Potential competing interests: No potential competing interests to declare.

The current manuscript is written on research involving fish nutrition and replacing conventional, expensive soybean meal with alternatives. The idea of the research is novel, and the manuscript is well-written and clear.

However, I suggest adding an economic comparison of different feeds with respect to the feed-to-gain ratio or based on net profit.

Secondly, I would suggest improving the conclusion with a solid statement for the clarity of the reader regarding which feed has performed better in fish.

This paper can be accepted as the quality is good.

Thank you!
