Potential competing interests: No potential competing interests to declare.

The manuscript "Lymphoma: Potential viral antagonism between HTLV-1 and JCV associated with increased survival time" deals with the relevant issue of viral interactions, which shows important interplay of infectious viruses, particularly with retroviruses in the case of neoplasms, as this text shows. I would recommend the publication of this brief manuscript.

In the title, I think that the term "antagonism" could be changed to "inhibition" as no proof of antagonism is provided; also, the term "time" seems redundant.

I have no further suggestions.
