Potential competing interests: No potential competing interests to declare.

1. In your abstract regarding your findings, you have explained that there are the so-called "both negative and positive views." What do these negative and positive views mean? As it's a research and scientific finding, you should not make your results explained in very vague terminology, so better if you could explain what those negative and positive views are.
2. Whenever you explain, you should cite it exactly. As it's scientific writing, you should cite properly. For instance, from where did you get this kind of note? *"One of the leading reasons that has made leaders adopt tough measures against the refugees and migrants is the perception created by publicity that emanates from the global media. The media has caused anxiety among both citizens and policymakers around the world (Laub, Z. n.d.). The global media serve as a focal point at which information is shared across the world. The framing of migrants from Africa to Europe in the global media is complex and quite obscure. Across the European countries, attitudes towards refugees and immigration have toughened in recent years." Currently, it's found to be very easy to get an organized note in any discipline because of AI, so better if you could cite properly.*
3. In the background, it's a must to show how media framing is very much important and powerful in terms of influencing people's perception. Also, better if you could show to what extent the media organizations you are working with report migration and related issues. It would be very nice if you could also show the impact the media has on migration and migrants.
4. What are your scientific reasons for including CNN, BBC, and other media organizations rather than others like Al Jazeera, CCTV? Whenever you choose to include participants in your study, it's a must to state your concrete reason for including them.
5. You have also used a very old reference like 1974! Better to use a recent reference, at least an article or book which is written within a ten-year interval.
