Potential competing interests: No potential competing interests to declare.

In this article, the author primarily reviews some of the well-established results of VB-groupoids and the representation of Lie groupoids over bundles, with several examples. I have the following comments about this article:

1. The article contains only definitions and examples, but no statements or proofs are added.
2. It has many typing errors.
3. The article doesn't add anything new to the existing results.
4. Very few references are added.
5. References are not cited in the article.

Based on these points, I would not recommend the article in its current form, even as a short review article. I will recommend that the author make changes based on the above points to make it suitable for consideration for publication.
