

Review of: "Antimicrobial Sensitivity of Plant Extracts of *Acacia arabica*, *Prosopis juliflora*, *Abutilon indicum*, and *Bryonia laciniata* on *Staphylococcus aureus*, *Pseudomonas aeruginosa*, and *Escherichia coli*"

H.A. Rafeey

Potential competing interests: No potential competing interests to declare.

The objective of the study is not very clear.

What was the reason or criteria for the selection of microbes? It was also not clear which type of strains of bacteria were used.

In the section heading 1.5. Antimicrobial Properties, the author mentioned already reported antimicrobial activities of the selected plants against the pathogens so what was the additional work in the study I did not get it.

In preparing the plant extract and fractionation, the methodology should be comprehensively written.

What was the standard to match the turbidity for the selection of the microorganisms grown in the media plates?

Discussion is very poorly comprehended and the conclusion needs to be rewritten with the clear-cut statements.
