Potential competing interests: No potential competing interests to declare.

This research provides a commendable exploration into the perceptions and experiences of human rights violations among individuals with mental illness. The authors' dedication to addressing such a crucial societal issue is truly admirable. However, I suggest expanding the introduction to delve deeper into the root causes of mental illness and its profound impact on affected individuals' lives.

Furthermore, additional details could enhance the research design section, particularly regarding the methodology employed for data collection. It would be insightful to learn more about the challenges faced by researchers in gathering data from individuals dealing with mental illness and the strategies employed to overcome these obstacles.

The authors have achieved a remarkable feat in presenting their research findings effectively. However, I am intrigued to learn more about the process of data collection, considering the inherent difficulties involved in studying this vulnerable population. A more thorough exploration of this aspect would provide valuable insights for future researchers, highlighting the necessary preparations and approaches required to conduct similar studies successfully.

The conclusions drawn from the research findings are noteworthy, particularly the recommendations for improving the situation of mental health human rights in Nigeria. However, I am concerned about the apparent discrimination faced by individuals with mental illness from friends, family members, and house owners. It would be beneficial to elaborate on strategies to educate and counsel these groups to foster inclusiveness and support for individuals with mental illness, as rejection from loved ones can be profoundly distressing for those affected.

In conclusion, this research represents a significant contribution to the field. My heartfelt appreciation and congratulations to all involved authors for their dedication and valuable insights.
