Potential competing interests: No potential competing interests to declare.

This article is quite interesting for literary studies. On the one hand, the article does not mention in detail what his contribution to literary science in general is. Researchers have not explained the data in detail. How was the data validation in this study conducted? My suggestion is that researchers should write the general research results and research contributions in the abstract, this is important so that readers can immediately grasp that this research is important to do. Good Job and Good Luck.
