Review of: "Temporal Feature Weaving for Neonatal Echocardiographic Viewpoint Video Classification"

Mohammed Ammar¹

1. University of Boumerdes, Boumerdes, Algeria

The work is very interesting; a new database on fetal ultrasounds has been created. Comments:

-The authors should explain the annotation step in detail.

-Is the annotation made for classification or segmentation?

-In the case of segmentation, it is important to indicate the regions of interest to be annotated: head, neck, hand, femur, cervix...
