Beta-propeller protein-associated neurodegeneration

INSERM

Source

INSERM. (1999). Orphanet: an online rare disease and orphan drug data base. Beta-propeller protein-associated neurodegeneration. ORPHA:329284

Beta-propeller protein-associated neurodegeneration (BPAN), also known as static encephalopathy of childhood with neurodegeneration in adulthood, is a rare form of neurodegeneration with brain iron accumulation (NBIA) characterized by early-onset developmental delay and further neurological deterioration in early adulthood.
